

Ballista 1

Do NOT paint the model unless told otherwise.

Please break and carefully file down the parts shown in the picture.

Please notice the "UP" direction on each part

Hand the kids 2 driller screws and screw them onto the round part, just enough to see the screw's tip on the other side

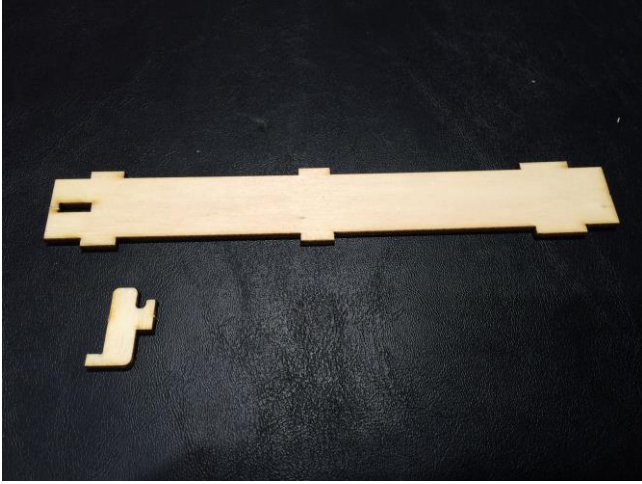

Screw the first part onto the arm, again just enough so we can see the screws' tip on the other side of the arm.

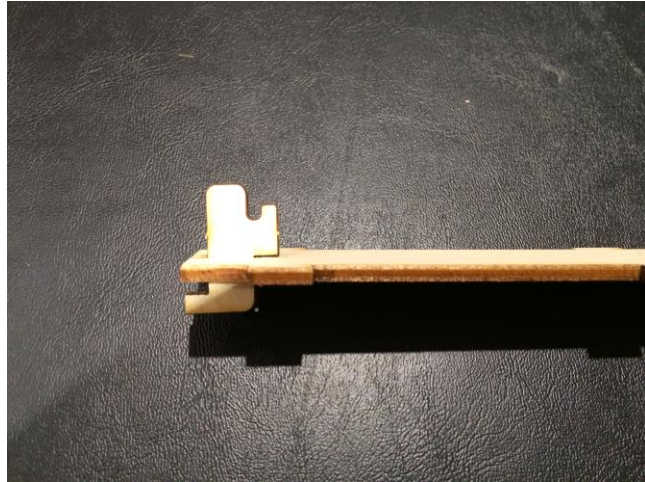

Only then take another round part, place it on the other side of the arm and tighten the screws

Go through the same process again with the other arm. Please check directions before continuing.

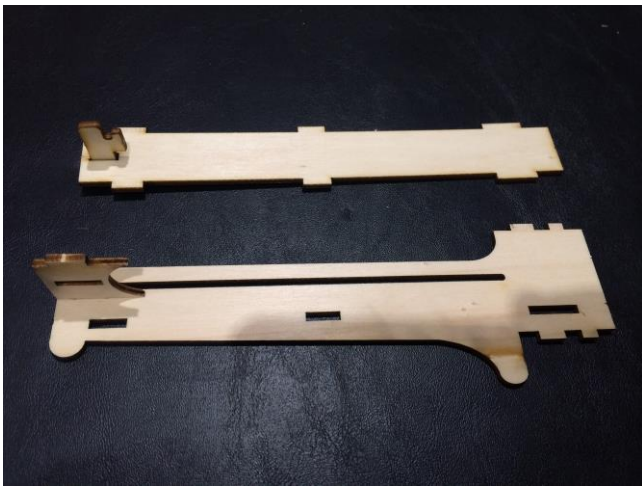

Break and file down the parts shown in the picture. We are going to name the small part the "Z" part.

Insert the small part into the crack as shown in the picture. **DO NOT USE GLUE!!!!**

Break and file down the parts shown in the picture. Then glue the parts together. Make sure not to use too much glue!

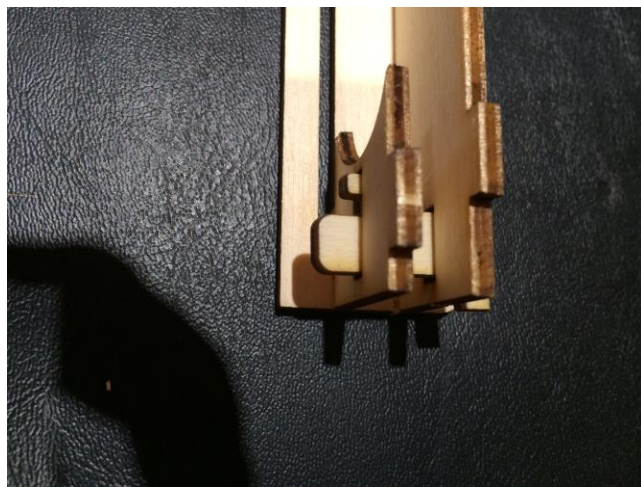

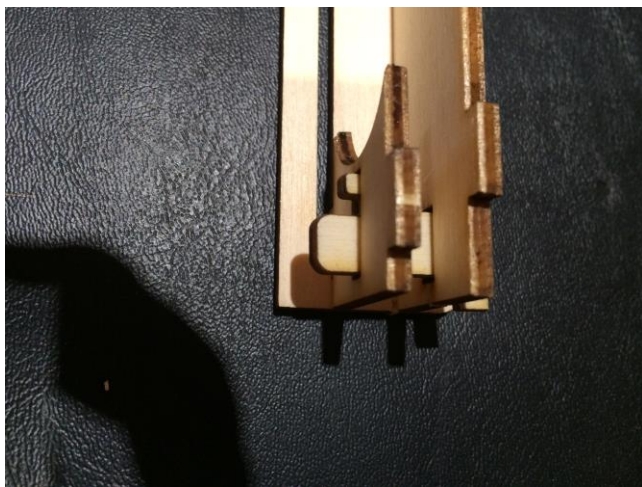

We are going to connect the pieces we glued so far. Please follow the instruction carefully!

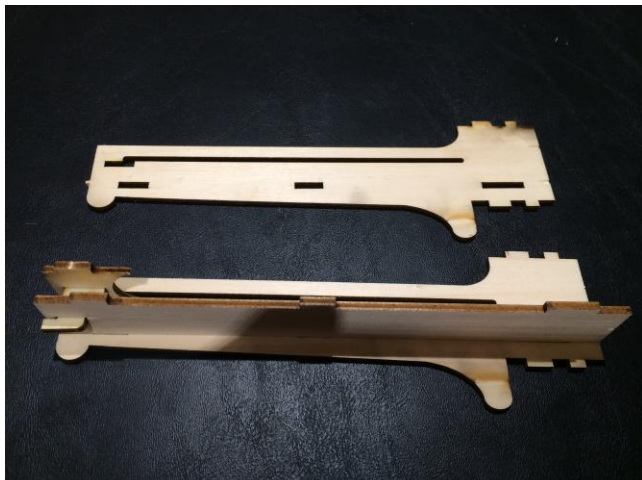

Insert the Z part into the crack, and glue the long part onto the side of the base.

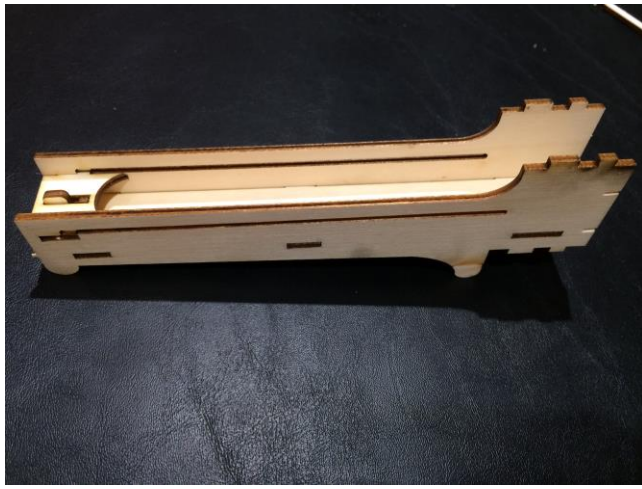

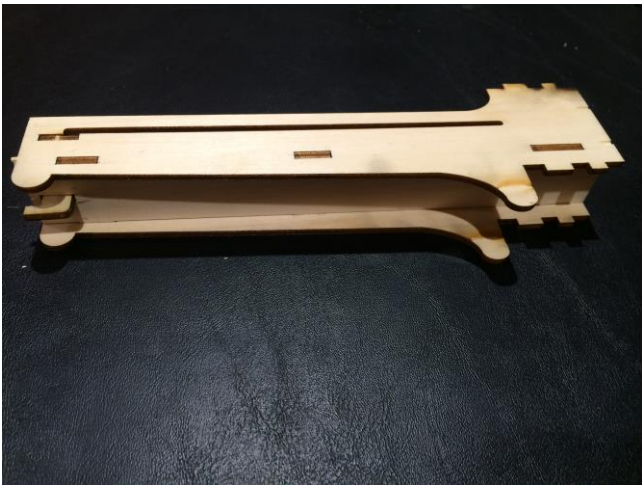

MAKE SURE NOT THE GLUE THE Z PART!!!

Here we have a better angle to see how to insert the Z part before gluing the long parts together.

Break down and file the extra part as shown in the picture.

Glue the part to the other side.

Before finishing class, check all models and make sure all the parts are glued correctly!
