

Castle4

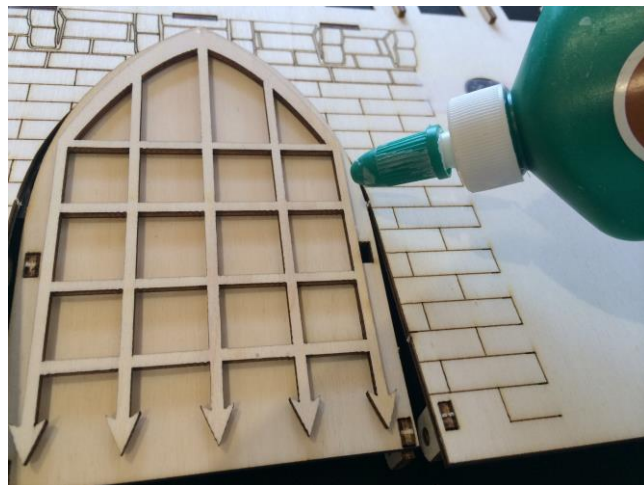

Check all the steps from the last class before continuing.

Pop the front gate's bars,

Place the model on the table so the front side is facing up

This square mark will help us place the gate in its place

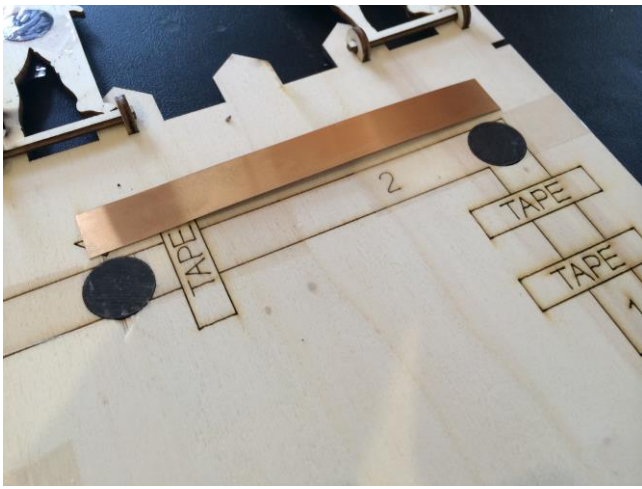

Use the square on the plate to locate the bars on the front side.

Glue the part to its place.

Make sure the gate is centered!

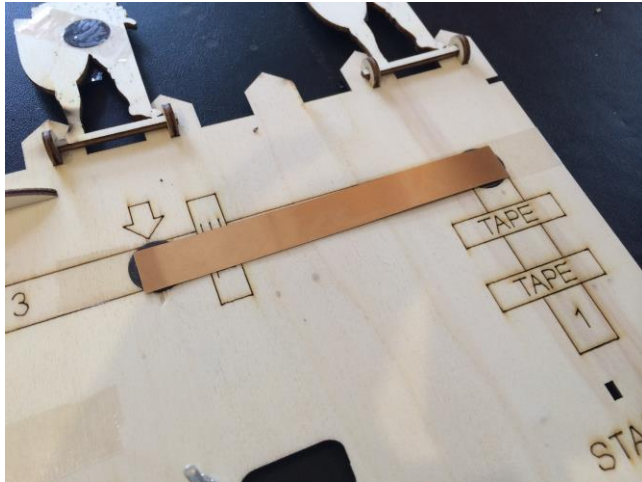

BEFORE HANDING THE METAL PLATE TO THE KIDS, GIVE SAFETY INSTRUCTION:

1. All plate are to be on the table at ALL TIMES.
2. These plates are as sharp as knives, treat them as such. If a kid plays with the plate, take his model.
3. If a student lifts the metal plates off the table when not told, take the model back!!!

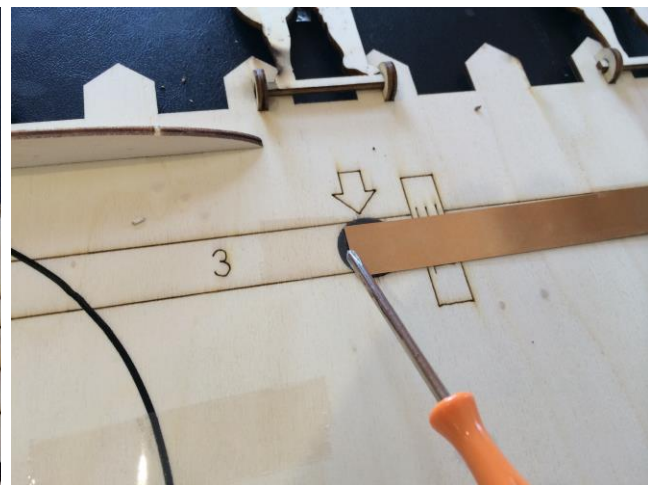

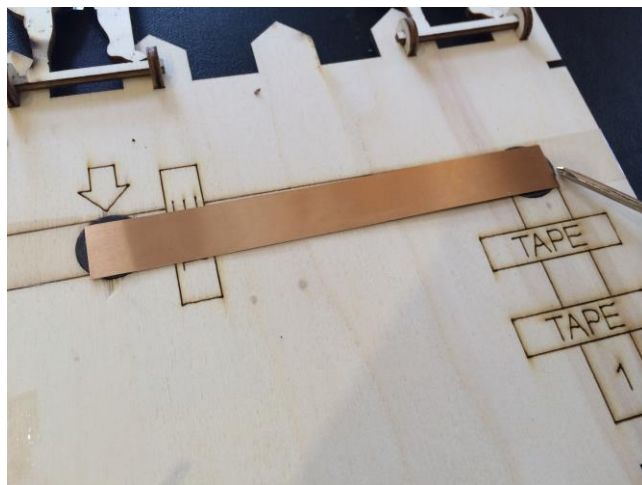

After explaining to the kids what to do and not do with the metal plate. Hand **1 short metal plate** to the students.

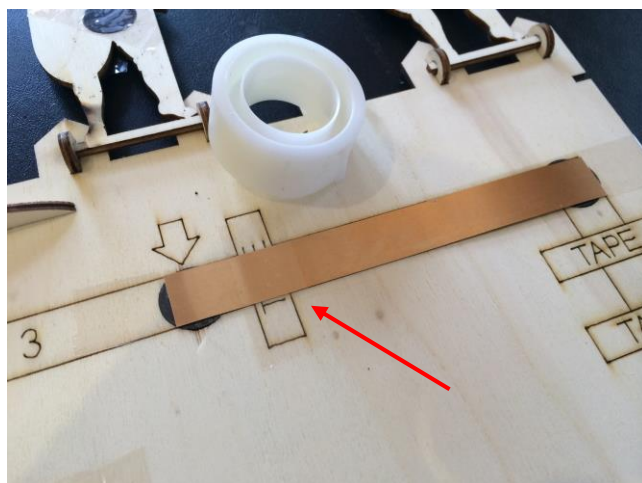

Make sure the gate's bars are now facing the table.

Place the metal plate between the two right magnets, just below the two right knights.

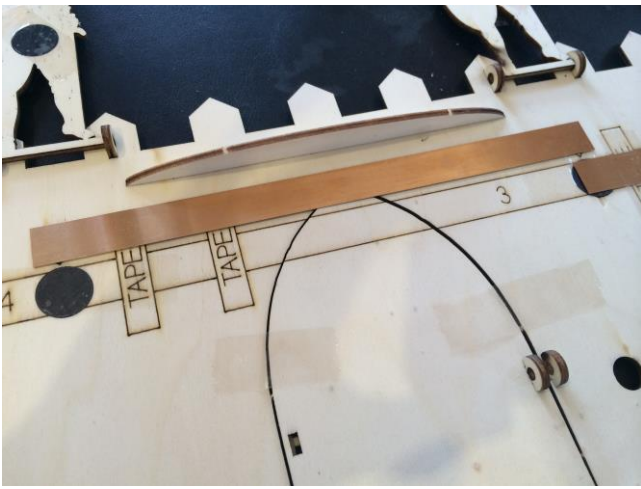

Check that the edges of the plate cover the magnets completely from both sides

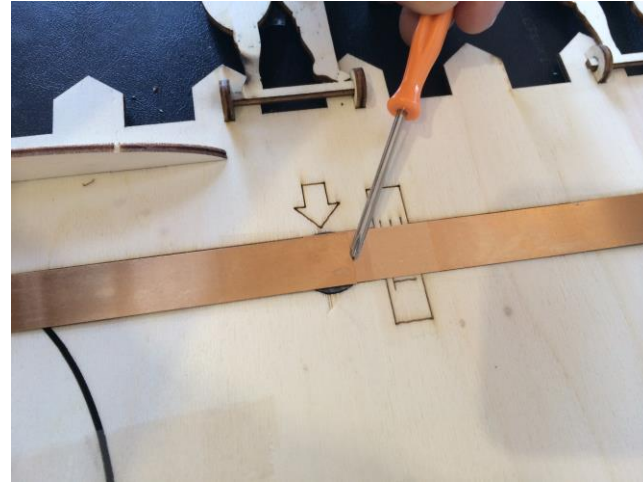

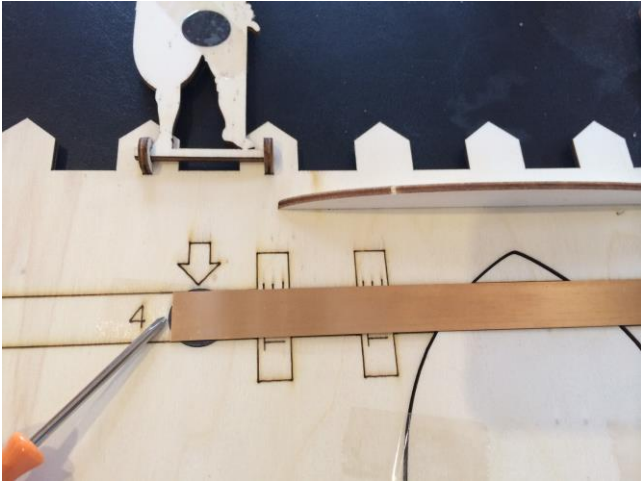

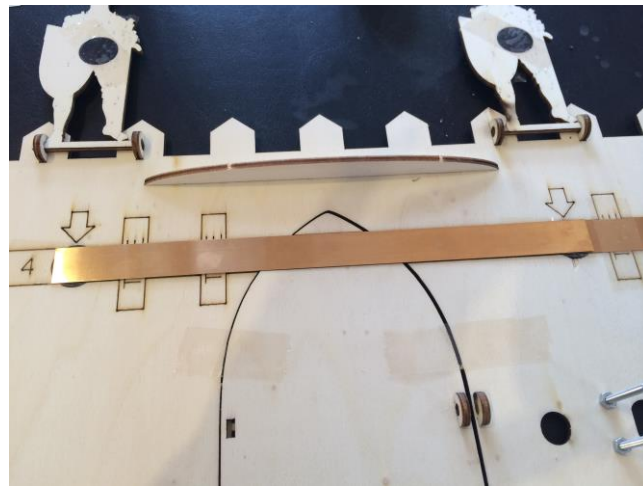

Tape the plate to the castle.

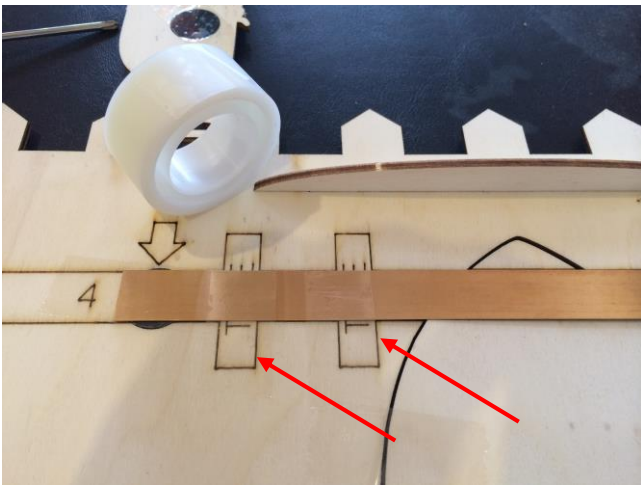

Look at the designated area.

After checking the first plate. Hand 1 long plate to the students.

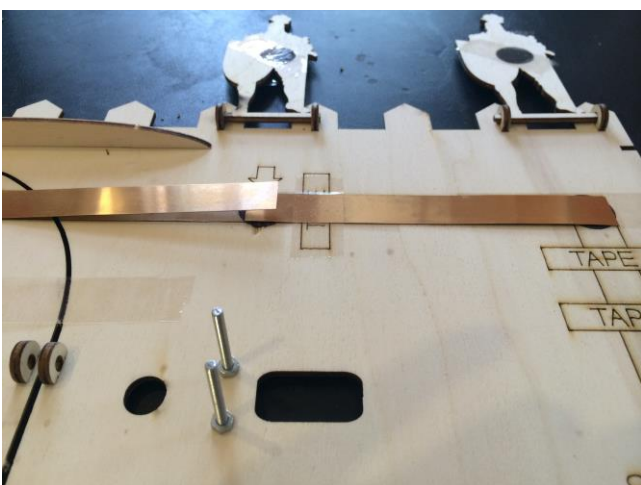

Place the metal plate between the two middle magnets, just below the two middle knights. Check that the edges of the plate cover the magnets completely from both sides.

Once placed in its place, tape the long plate to the wall.

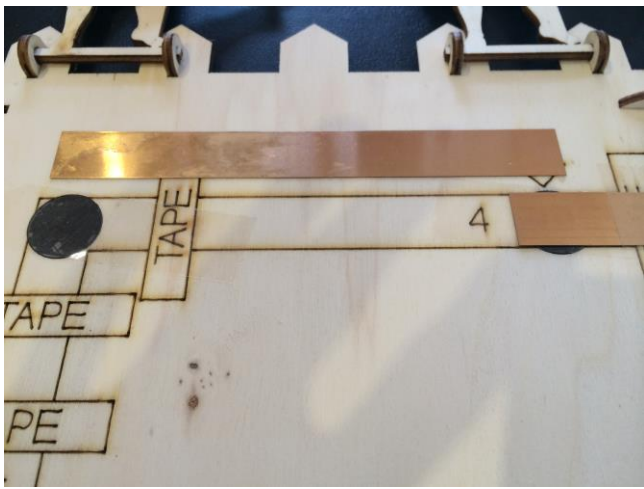

Use two pieces of tape and place them on the designated area.

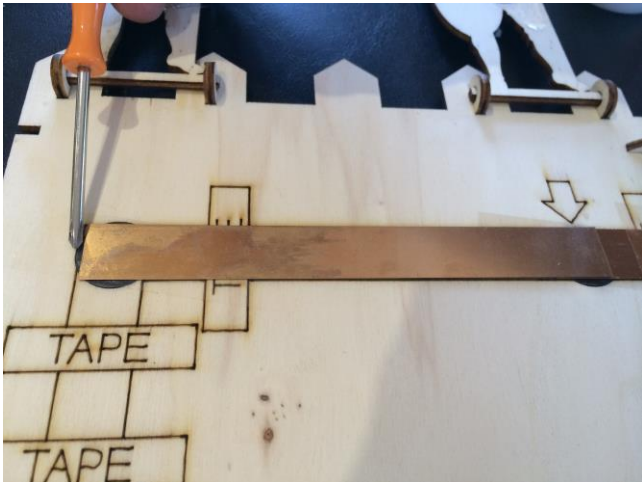

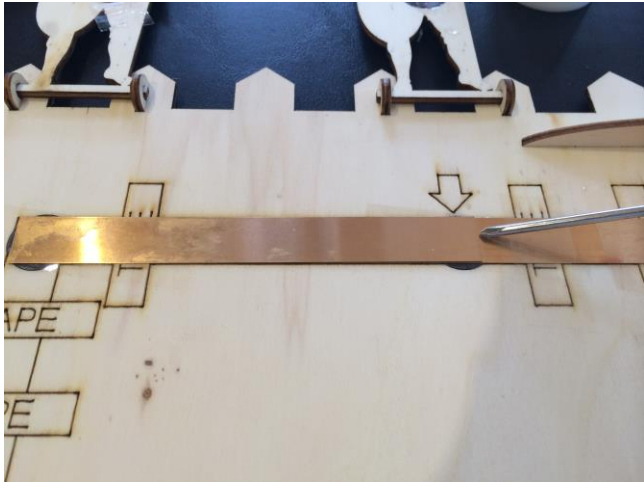

DO NOT BEND THE METAL UNTIL THE LAST LESSON PLAN!

THIS IS AN EXAMPLE OF HOW TO BEND THE PLATE!

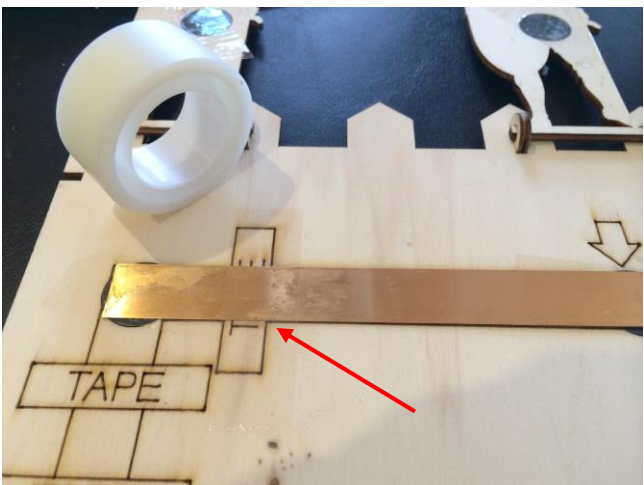

Do not bend just the tip, roll the whole metal plate and create a curve.

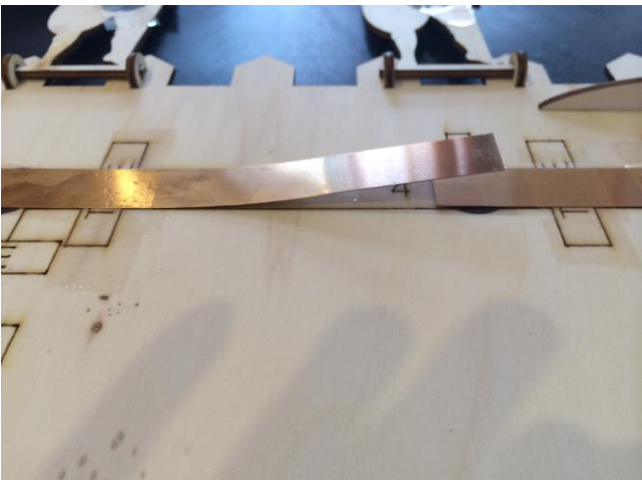

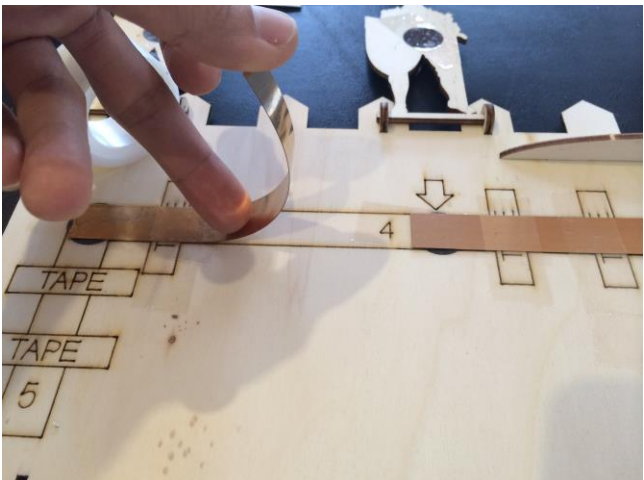

Check the two first plates. Once done, hand the student 1 more short plate.

Place the metal plate between the two left magnets, just below the two left knights. Check that the edges of the plate cover the magnets completely from both sides.

Tape the plate to the castle.
Look at the designated area.

DO NOT BEND UNTIL THE LAST LESSON PLAN.

This is an example of how to bend/curve the plate
